Paragraph 1. Legal Basis

The European Securities and Markets Authority (ESMA) issued the Trade Reporting Technical Standards (TRTS) under the EU-Regulation 2017/2402 (MiFID II). The standards define the data elements, formats and reporting timelines for all investment firms operating in the EU.

Paragraph 2. Core Data Elements

For every transaction, the following core data elements are mandatory: Trade_ID, Asset_Class, Timestamp, Counterparty_LEI, Price, Quantity, Currency, Execution_Venue, and for derivatives, Maturity_Date and Underlying_ISIN. The field `Execution_Venue` must contain a valid Market Identifier Code (MIC) as defined by ISO 10383.

Paragraph 3. Validation Rules

* Price must be ≥ 0.

* Quantity must be a positive integer.

* Counterparty_LEI must pass the GLEIF checksum algorithm.

* If Asset_Class = “Derivative”, both Maturity_Date and Underlying_ISIN are required and must be valid dates/ISINs.

Paragraph 4. Reporting Frequency

* Equities, bonds and covered funds – end-of-day (EOD) reporting, no later than 23:59 CET on the trade date.

* Derivatives – real-time reporting, within 15 minutes of execution.

* Structured products – within 30 minutes of execution.

Paragraph 5. Audit Trail Requirements

All reporting firms must maintain an audit trail that captures: the original trade data, the submitted report, any validation error messages, and the final acceptance confirmation

from the National Competent Authority (NCA). The audit trail must be retained for at least five years and be made available to ESMA upon request.

Paragraph 6. Recent Amendments (2022-09-15)

Effective 1 October 2022, ESMA introduced a new optional field `Regulatory_Transaction_Type` that allows firms to indicate whether a trade is “New”, “Amendment” or “Cancellation”. Although optional, the field is strongly recommended for improved downstream analytics.
